

GREEN FUTURE
C O M P U T I N G

Company Profile

About US

Green Future Computers is Dubai, UAE based IT company. We Focus on Eco Friendly Technologies which can provide more productivity with less energy utilization and cost. Our aim and strategy is to reduce IT cost and electronic wastage with innovative and mature technologies which will bring more business with less capital.

Our Solution portfolio includes private and public cloud computing, Server Virtualization, Desktop Virtualization, Backup and Disaster Recovery solution, advanced networking technologies, Document management solution, network security solutions, ERP solutions, Cost effective communication solutions, wireless solutions and wan optimization solutions.

We realize Satisfaction of customers is critical in business. We deployed CRM system and customers are able to interact with us through our customer portal. Our portal enables you to see quotes, invoices and SLA. Also they can report problems through the portal which enables to track support engineer troubleshooting and response times.

Our Solutions

GFC tailored some solutions which will enable our customers to increase their productivity with reducing Capital, operating expenses and to be part of Green Earth movement.

- Green Data Center with Private Cloud
- Server Virtualization
- Desktop Virtualization
- Backup and Disaster Recovery
- Unified Communication and Telepresence
- Wireless Networking
- Back office integration
- Advanced Security Computing
- Enterprise Networking
- Surveillance and access control
- ERP and POS

Our Services

GFC can serve you with many service profiles. They are,

- Consultancy
- SLA
- AMC

Green Data center with Private Cloud

It will enable to use IT resources as service and allows you to create a separate virtual datacenter for each department and provision resource on demand. It will automate IT services like creating servers, storage and networks. It will use the resources on demand. This feature will reduce operation costs with intelligent energy utilization. Our experts are able to design and implement VMware, Microsoft and Linux based private clouds.

Server Virtualization

Server Virtualization enables running more than one OS in a single Server Hardware. It will reduce significant Capital and Operational Expenses. Server Virtualization enables recovery in seconds, Geographical backup and disaster recovery and to forget horrible waiting for the new server for months. We can design VMware, Microsoft and RedHat based Server Virtualization solutions.

Desktop Virtualization

It is painful to transform 100 desktops from xp to windows 7. If Desktop corrupted, re installation is painful and wasting employee productivity for at least one day. If any problem happened in branches, it is difficult to reach and troubleshoot the problem. Desktop Virtualization solves all these challenges. Your desktop will be sitting in the server and you can access it from anywhere and any device whether it is zero clients, thin client, Apple IOS, Linux or android. We do Xen desktop and VMware view based solutions.

Disaster Recovery and Backup

Backing up the data is very important for business. Increasing amount of data is challenge for backup storage space. But new intelligent technologies can reduce space up to 90%.

Geographical backup or remote site backup is necessary and today's business requirement demands it. Because it will prevent data losses from disaster like earthquake, storm, flood or fire.

Unified Communication and Telepresence

Communication is not a telephone call anymore. Modern communication combines Telephone, email, video and texting, screen sharing, webinars, telepresence, online fax and other components. It will increase productivity while reducing travelling cost. We do cisco, Microsoft and open source based solutions.

Wireless Networking

Evolution of new wireless devices brings new challenges to business and needs high performance wireless networks with tight security. Wireless system with roaming capability between access points is very challenging feature of wireless controller and it enables single point of management and more features.

We do Cisco, Aruba and Aerohive based solutions

Back Office Integration

It enables an advanced modern office which has wonderful features like separate website for each department, web based Directory, file viewing and editing straight from the web, discussions, workflow management, blogs, wiki, Record management, document management and emails.

Advanced Secure Computing

Our business enemies, internet robbers, hobby attackers are a real threat for business. Their aim will be whether to destroy or steal. They will use from digital knife to intercontinental missiles. It is very challenging for business to prevent these types of attack. It is essential to place better defense system with best defense strategy.

Enterprise Networking

Advanced multi-lane roads, Intersections, bridges is essential for progress of country or city. Advanced networking infrastructure is essential for business. We do Cisco, Juniper, Dell and H3C based Networking Solutions.

Surveillance and access control

Robbing and other types of crimes are universal today. CCTV and access control can limit these types of threats.

ERP and POS

Enterprise resource planning will reduce expenses and headache and increase productivity, fast processing and other features. It will enable single management software for warehouse, accounts, human resource, sale and other department and integrate different department activity together. Point of sale automates sales process.

Consultancy

GFC can analyze the requirement of clients and recommend appropriate IT infrastructure.

Service Level Agreements

GFC manages client networks with real time security and management monitoring software over WAN (if any small problem happens, it will report us automatically), with or without resident engineers, unbeatable response time, impressive troubleshooting time range. The online client portal enables clients to report problems, reading IT tips, seeing quotation, invoices and other data's from GFC portal and much more.
